

STEMCELL
CENTER

A Network of Regenerative Medicine Practitioners

WHO SHOULD JOIN?

Your one-stop Stem Cell hub

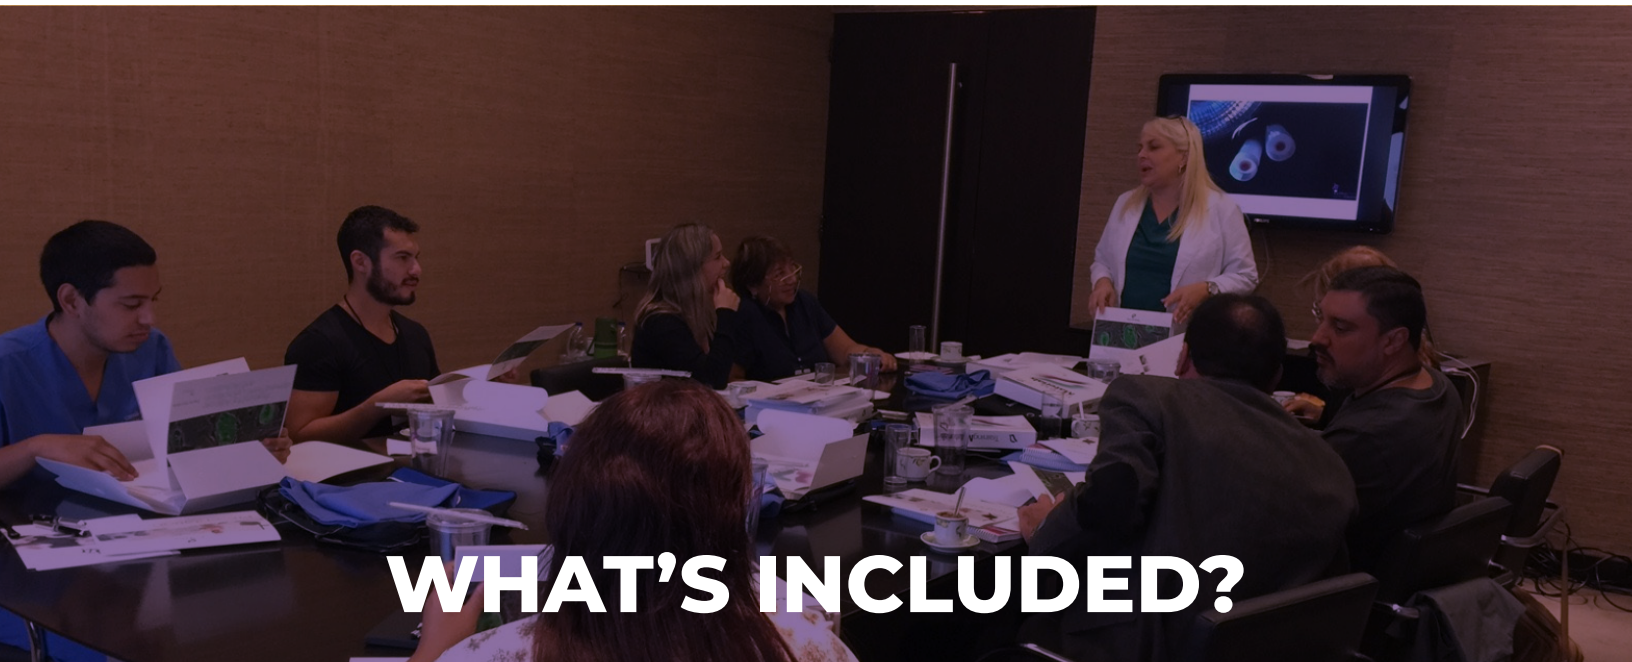

If you are a medical practitioner who recognizes the power of regenerative medicine, and who wants to be part of this growing industry, this is the opportunity for you.

The Stem Cell Center Network is a unique international network of medical practices, dedicated to providing scientific and technological support, as well as enhancing the networking among regenerative medicine practitioners pursuing to bring these therapies to their patients.

Being part of the Stem Cell Center's membership program offers you a turnkey solution to start your own regenerative medicine practice, or to incorporate it into your existing practice.

Through our membership program, you will gain access to the latest science and technology, as well as the knowledge and support of our expert scientific advisory board, plus, but not only that. Stem Cell Center members receive marketing and business mentoring that will help them bring their endeavours to the next level.

- Become a renowned practitioner of regenerative medicine with our cutting-edge support, training tools and business experience.
- Provide your patients with a new alternative to improve their quality of life, relieve pain and manage their conditions with the medicine of the future.
- Get the tools to develop a thriving practice of regenerative medicine in your city, town, or territory.

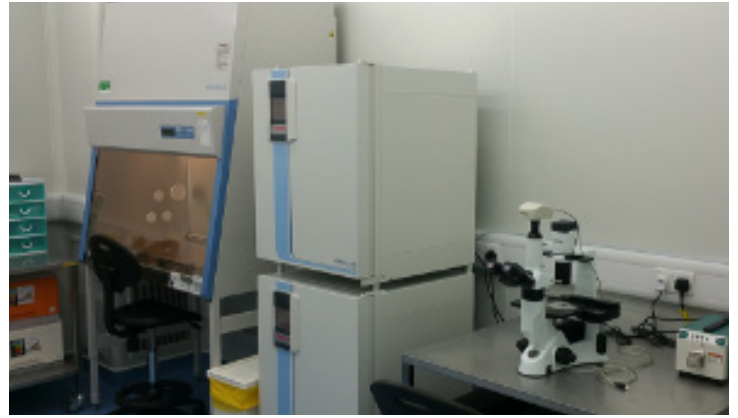

WHAT'S INCLUDED?

- Enjoy full on-site medical training and support from our faculty members. Full on-site training and support is provided on how to carry out the adult stem cell based procedures in your clinic.
- Lifetime Access To Support & Training: Although our membership is a one-time fee, our support and guidance are for as long as you need. In addition, when you become a member of our network, you have the right to participate as a Faculty Member in all medical events and scientific exchanges planned by our company.

- State-Of-The-Art Equipment and Stem Cell Technology: We'll set you up with the best equipment you need to process stem cells and carry out the regenerative procedures for your patients including set-up, installation and training.

- Business & Patient Handling: We'll train you and your staff on the full business operations of running a regenerative medicine practice, and advise you on how to best handle patients.

- One Year Of Marketing Support: Our marketing experts will manage your Facebook, Google Adwords and email marketing campaigns for one year. We'll also fully train your staff so you can take over after the first year.

- Profit Sharing On Events In Your Territory: We'll share the profits with you in your membership territory. The membership of stem cell center is exclusive in the designated area or territory, meaning that any event held will be in exclusive association.

ON-SITE MEDICAL TRAINING

Since this is a personalized training, we will focus only on the type of treatment and illness you want to target. In fact, we not only will teach you the laboratory process of how obtaining the cells but also perform the reintegration of the cells to the patient, and then teach you all the different ways the cells could be administered depending on the medical condition the demonstrative patients are facing. The laboratory process of obtaining stem cells from Fat or from bone marrow and the PRP isolation, like any lab process most of the times tends to be very methodical. It is therefore very common for doctors to delegate this part of the process to their nurses or a medical assistant. With our onsite courses, all your nurses and medical assistants will be trained so they can always help you when you need them. There is no better way to do it than One-on-One training with our instructors.

The Practical Experience includes the following topics:

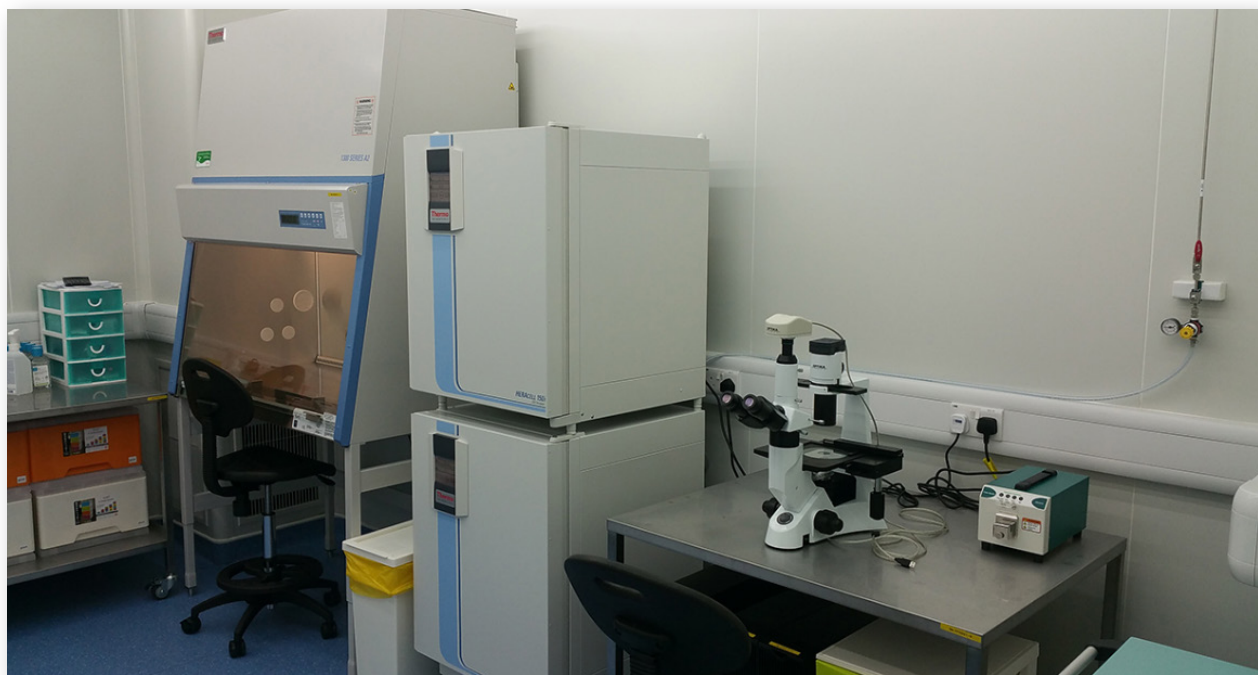

1. Operative Pre-Post Instructions.
2. Practical experience of fat tissue collection.
3. Practical experience in SVF insulation, washing, digestion, and centrifugation.
4. Photo-activation techniques and cellular counting.
5. Defrosting and freezing techniques for cellular products.
6. Dosing and handling liquid nitrogen freezers.
7. Puncture, extraction, and filtering techniques.
8. Equipment operation and practical experience under supervision.

EQUIPMENT, SUPPLIES AND INSTALLATION

We will take away the hassle of choosing the equipment and looking for the kits and consumables for isolating the stem cells. By becoming a member of our stem cell network, we will deliver and install all the necessary laboratory pieces of equipment.

Our company uses several platforms and technologies to achieve project objectives in the short and long term. To operate a successful stem cell center, we need to install the essential laboratory equipment for the harvesting, isolation, and reintegration of autologous stem cells as well as equipment for the cryopreservation of allogeneic cellular products. Some customers may require specialized culture equipment such as Co2 incubators, as well as characterization and analysis equipment.

MARKETING, BUSINESS & PATIENT HANDLING

As a project participant and a member of our network of clinics, you will be provided with a commercial approach program with practical tools and ideas to promote your regenerative medicine practices.

Topics include:

- Guides on how to do a successful Patient consultation.
- Training in telephone correspondence and handling objections.
- Patient flow management and process control.
- Frequently Asked Questions (FAQS).
- Digital presence (website, landing pages, social media).
- Monitoring strategies (follow-ups).
- How to use paid ads (Adwords) and social media marketing (Facebook ads) to attract new patients.
- Email marketing.
- Video Production.
- How to use content marketing to attract the target audience.
- Promoting a regenerative medicine clinic in the digital era.
- Influencer marketing.
